# MICRONIZER

An absolutely innovative device,  
practical in use, fantastic in results.

**Micronizer** combined with liquids made in Fisiocosmetica laboratories allows to reach up the deeper layers of the skin.

**Micronizer** helps you maintain your skin HYDRATED, NOURISHED, LUMINOUS AND ELASTIC.

THIS IS THE RESULT ALREADY 'AFTER  
A WEEK OF APPLICATIONS

In the case photographed above, the 41-year-old lady employee by profession used **Micronizer** with our Anti-aging serum

The camposition is as follows:

Copper (Cu)
Manganese (Mn)
Zinc (Zn)
Silicon (Si)
Calcium (Ca)
Magnesium (Mg)
Potassium (K)
Sodium (Na)
Aloe Vera extract

**Micronizer** is used without necessity of use of the hands...  
... Which is practically impossible with creams.

Even the best creams in the world, after inserting hands in, the bacteria amount will increase dramatically, to the point that it is much better not to use it at all!!!

With **Micronizer** thanks to micronization of liquids (of size up to 0.03 microns) you can make applications even with makeup on (The trick is in fact the macromolecules, as **Micronizer** itself fragments liquid into them).

Give it a try yourself: simply cutting an apple into 2 halves. One is aside, on the other we pass our serum every minute. After just 15-20 minutes the certain result will be:

↑  
The first half is attached by free radicals and is dark, not elastic, showing signals of bacteria load

↑  
The other half will be intact as just cut

**INCREDIBLE:**

After just one week the result will be very noticeable. The level of customer approval on **Micronizer** is 100%
